

## DESCRIPTION

A solenoid-operated, 2-way, piloted, poppet-type, normally closed, screw-in hydraulic cartridge valve, intended to act as a blocking or load-holding device for low flow circuits.

## OPERATION

When de-energized, the EV56-2B acts as a check valve, allowing flow from 1 to 2, while blocking flow from 2 to 1. When energized, the cartridge poppet lifts to open the 2 to 1 flow path. In this mode, flow from 1 to 2 is severely restricted.
